

ideal for flea and tick control

optimal for indoor flea infestations

disrupts flea life cycle

features (S)-methoprene

CHOOSE THE PRECOR® PROTOCOL FOR FULL-CIRCLE FLEA AND TICK CONTROL

The Precor® lineup of concentrates, aerosols, and foggers connects you to flea and tick control spanning a wide variety of indoor infestation scenarios. (S)-methoprene breaks the life cycle of fleas for up to seven months. The positive profile of this active ingredient allows it to provide the control you need without posing a risk to non-target insects, mammals, or humans, making Precor® lineup the ideal choice for residential and sensitive accounts.

ABOUT THE ACTIVE INGREDIENT - (S)-METHOPRENE

All Precor® products are formulated with the core active ingredient, (S)-methoprene, an insect growth regulator (IGR). This molecule has been used for more than 35 years by pest control and public health professionals to prevent fleas from developing into nuisance breeding, biting adult insects.

FEATURES

- The (S)-methoprene molecules migrate deep into the base of carpets and upholstery
- Provides extended residual action for up to seven months of preventative control of fleas

BENEFITS

- Compatible tank mix (Precor® IGR Concentrate) partner for a wide variety of insecticides
- Breaks the flea life cycle to inhibit rebound infestations
